Pat,

I also wanted to let you know that we have FOIA that is requesting the NE Juneau County Groundwater Sampling Report.

Generally inspectors are directed to record what they did and record observations made/collected in reports. (Example, we went to these spots, took a sample in this manner and the sample had a result of x). They can include aggregated factual information which is reflective of multiple observations such as *"40% of the samples collected were greater than regulatory standard of x"*. They would not include statements such as 40% of the samples showed violations of x or facility A is causing problem B.

The analysis of available data, such as observation from an inspection report, is typically described in a referral memo or/and in the pleading sections of an enforcement action. We are doing that kind of analysis separately but need to confirm our conclusions with some experts on the isotopes before going final.

I think it is important to get the data including the organization of that data in the form of the sampling report out to the public as promised.

I reviewed the document...fixed some typos and added a few comments. I saved it so hopefully you can see the changes/comments.

I was surprised that there was no analysis or interpretation of the data in terms of what we think it means. Do you not include that in the reports? That is a surprise to me and I'm sure will be a surprise to WDNR and others....folks are going to want to know what it means.

Ryan and I are the only ones who have reviewed the report.

Who has concurred on this report so far? I'm going to review before I leave for the all-day retreat.
